Kistelow P., Miazek A.;
Submitted (MAR-1997) to the EMBL/GenBank/DDBJ databases.
-:- FUNCTION: UNWINDS DOUBLE-STRANDED DNA AND RNA IN A 3' TO 5'
DIRECTION. GENERATES MULTIPLE SECONDARY STRUCTURES THAT INFLUENCE
RNA-BINDING PROTEINS. MAY PLAY A ROLE IN X-LINKED GENE EXPRESSION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         440 GFAPSGNGNGYGPGGTGFIPIPGGNGFSPGVGAGGQGPIIT---GLTILNQTIDI 496
